QUESTION:

Write code and connections in wokwi for ultrasonic sensor. Whenever distance is less than 100 cms send "alert" to ibm cloud and display in device recent events.

CODE:

```

SCHEMATIC/CIRCUIT DIAGRAM:

IBM CLOUD OUTPUT:

The screenshot displays the IBM Cloud IoT Platform interface. On the left is a dark sidebar with icons for various functions. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue 'Add Device' button with a plus icon is in the top right. Below the navigation bar, a tabbed interface shows 'Identity', 'Device Information', 'Recent Events' (selected), 'State', and 'Logs'. A close button 'X' is in the top right of the 'Recent Events' tab. The main content area contains a text description: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this is a table with four columns: 'Event', 'Value', 'Format', and 'Last Received'. The table lists four events, all with the same JSON value and 'a few seconds ago' timestamp.

Event	Value	Format	Last Received
event_1	{"distance":7,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":8,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
